
AS PONTES

EVIDENCE REVIEW FOR AI INFRASTRUCTURE

Atlas Research Note 01 | 4 August 2026

Albedo Industries

Executive conclusion

As Pontes has a verified energy and industrial-transition context, but the public evidence reviewed does not establish an available data-centre site or a viable demand connection. The candidate therefore remains at Gate 0.

RESEARCH BOUNDARY

No site, grid capacity, permit, financing, customer commitment or construction programme is represented as secured.

VERIFIED BASELINE

Generation legacy

Spain authorised definitive closure of the four As Pontes coal units (1,403.5 MW total) in August 2023. [AP-01]

Industrial transition

As Pontes is included in the Ferrolterra Just Transition Agreement area. [AP-02]

Mine restoration

The former lignite mine was restored as a lake and habitat. This is not evidence of developable land. [AP-03]

Transmission context

Red Eléctrica publishes an As Pontes transmission node. A mapped node does not prove demand-side capacity. [AP-04]

ATLAS FINDINGS

POWER - Context verified; capacity unverified

Obtain a written connection study for a defined load and parcel.

LAND AND PLANNING - Evidence required

Screen ownership, zoning, easements, ground conditions and environmental constraints.

FIBRE - Evidence required

Commission carrier route surveys with measured latency, diversity and delivery terms.

WATER AND COOLING - Evidence required

Treat the restored lake as an environmental asset, not a cooling source. Develop a low-water concept.

DELIVERY AND DEMAND - Evidence required

Verify the supply chain and qualified demand before technical design.

SOURCES AND METHOD

This desk review prioritises public primary sources. Verified means only that a source supports the stated regional fact; it does not verify site feasibility, grid headroom or commercial availability.

AP-01 Ministry for the Ecological Transition: authorisation for definitive closure (2023).

AP-02 Institute for Just Transition: Ferrolterra Just Transition Agreement.

AP-03 Endesa: As Pontes mine environmental restoration.

AP-04 Red Electrica: maps of the transmission network.

AP-05 Concello das Pontes: municipal and urban-planning information.
